Claude Certifications

The complete field guide to the four Anthropic Claude certifications: what each exam measures, what it costs, how to prepare for it, and how to sit it.

Associate Foundations | Developer Foundations | Architect Foundations | Architect Professional

---

320 practice questions
110 flashcards
25 courses
26 Academy badges
33 pages

Compiled by Amey Thakur

Written while preparing for these exams, after working through every course and tutorial in the official curriculum.
github.com/Amey-Thakur/CLAUDE-CERTIFICATIONS · amey-thakur.github.io/CLAUDE-CERTIFICATIONS

Facts drawn from the official Anthropic exam guides and program pages. A community study resource, not affiliated with or endorsed by Anthropic. Free to share.

A NOTE FROM AMEY THAKUR

Why this companion exists

I sat down to prepare for these certifications and found the material scattered: the blueprint in one PDF, the policies in another, the courses on a platform behind a sign-in, the registration mechanics somewhere else again, and the practical details, the ones that actually cost people a sitting, written down nowhere at all.

So I collected it. Every official exam guide, every policy, every course, the blueprints with their real weights, and the things I only learned by going through it: which domains carry the marks, which options an exam question is quietly steering you away from, and how much of a failed attempt is logistics rather than knowledge.

None of this required anything you do not already have. The official material is free, the blueprints tell you exactly what is tested, and the rest is steady work.

What I could not do is give you the questions, and I would not if I could. Every candidate signs a non-disclosure agreement, and a credential is only worth holding if the people holding it earned it. So everything here is built from published material: the official blueprints, the published scenarios, and practice written from scratch against them.

Read the roadmap, pick the exam that matches the work you already do, and work its page. Keep the cheat sheet for the day before. If a fact here disagrees with the official exam guide, believe the guide, and please tell me so I can fix it.

I put this in one place so your time goes into learning rather than looking. If it helps you get certified, it did its job. Good luck.

– Amey Thakur

What is in this companion

Five parts, in the order a candidate needs them: choose the exam, learn what it measures, prepare for it, sit it, and know where to go afterwards.

PART 1	**Choose your exam**	Four certifications across three roles, with no prerequisites in either direction. Pick the one that matches the work you already do.	5
PART 2	**Know your exam**	A page of facts and a cheat sheet for each certification: the blueprint with real domain weights, and the rules that decide questions.	8
PART 3	**Prepare**	What to study, in what order, and how to practice without touching material you are not allowed to touch.	18
PART 4	**Sit it**	Booking, proctoring, and the day itself, then what the result means and what happens if it is not the one you wanted.	25
PART 5	**Keep going**	You now have everything the exam asks of you. What follows is where to find the parts that keep moving.	29

How to use it. If you already know which exam you are taking, go straight to its pages in Part 2 and keep the cheat sheet for the day before. Everything here is derived from the official exam guides, which remain the authoritative source and are mirrored in the repository.

THE PART NOBODY WRITES DOWN

What I would tell myself before the first exam

Ten things that are all published somewhere, and that almost nobody reads until it is too late to act on them. If you take one page from this companion, take this one.

The blueprint is the scope, and it is enforced. Every exam guide says it plainly: anything outside the blueprint is not tested. People lose weeks reading around the subject. Print the blueprint, mark each objective red, amber, or green, and study red first.

Study by weight, not by interest. Applications and integration is 33.1% of the Developer paper. Claude Code is 3.1%. Two evenings on the wrong one is a real cost. The weights are published; use them as your timetable.

A failed attempt costs weeks, not just money. Fourteen days before a second attempt, thirty before a third, ninety before a fourth, and four attempts maximum in a rolling twelve months. That waiting period, not the fee, is what hurts.

Book earlier than you feel ready. Rescheduling is free until twenty-four hours before. An early booking costs nothing and supplies the deadline that makes the studying happen. Inside twenty-four hours the fee is gone.

Most failed sittings are logistics. Run the OnVUE system test on the machine and the network you will actually use, not a different one. A corporate network that blocks a single domain will end the exam after you have paid for it.

Fix your partner email before you plan anything. Domain record changes take seven to ten days. Discovering this the week you meant to sit is the most avoidable delay in the whole process.

For Architect Foundations, rehearse all six scenarios. The exam presents four, drawn from a published set of six. They are not a surprise. Working through all six beforehand converts the hardest paper into a familiar one.

The credential expires in twelve months. Renewal is free, open book, and not proctored, so it is easy. Letting it lapse is not: you sit the full exam again at full price. Put the date in a calendar the day you pass.

Read the score report properly if you fail. It gives percent-correct by domain. Weight each by its share of the paper and you will usually find the gap sits in one or two places, not everywhere.

Closed book means closed book. No notes, no documentation, no translation tools, no Claude. Everything in this companion is for before the exam, not during it.

PART 1

Choose your exam

Four certifications across three roles, with no prerequisites in either direction. Pick the one that matches the work you already do.

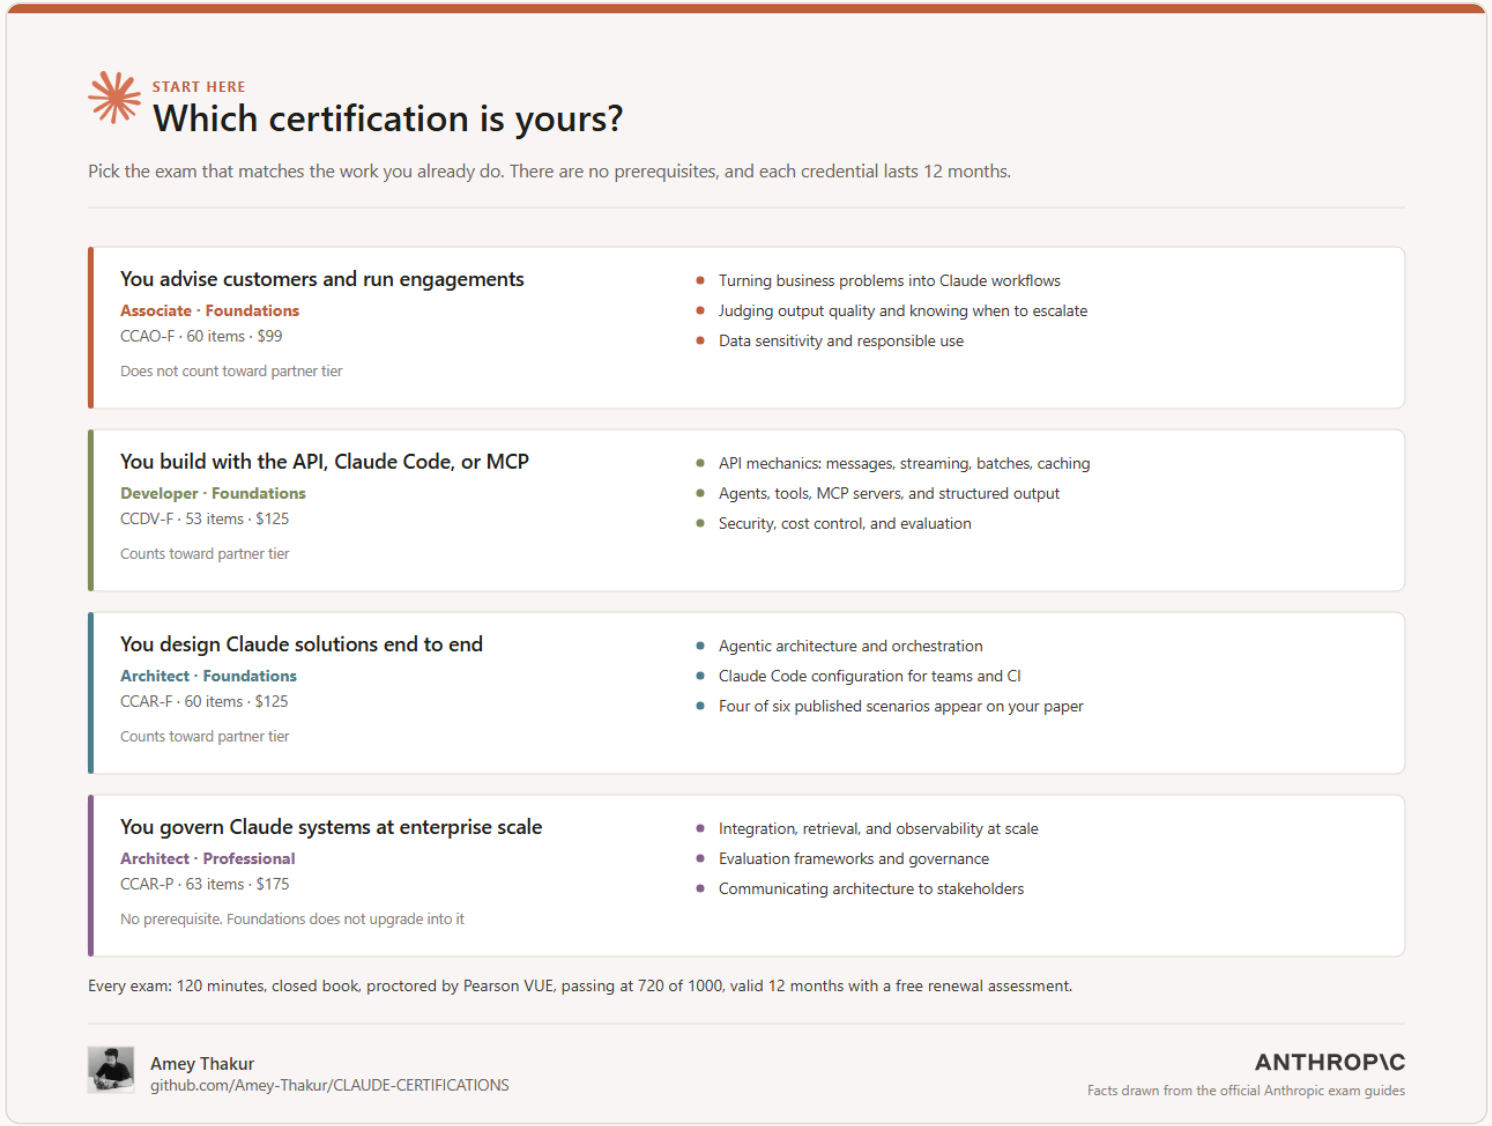

IN THIS PART

Which certification is yours? 6

The roadmap 7

Which certification is yours?

Pick the exam that matches the work you already do.

The roadmap

All four certifications: what each measures, what it costs, and what prepares you for it.

PART 2

Know your exam

A page of facts and a cheat sheet for each certification: the blueprint with real domain weights, and the rules that decide questions.

PART 3

Prepare

What to study, in what order, and how to practice without touching material you are not allowed to touch.

IN THIS PART

The official curriculum 19

A working study plan 20

The deck, one card at a time 21

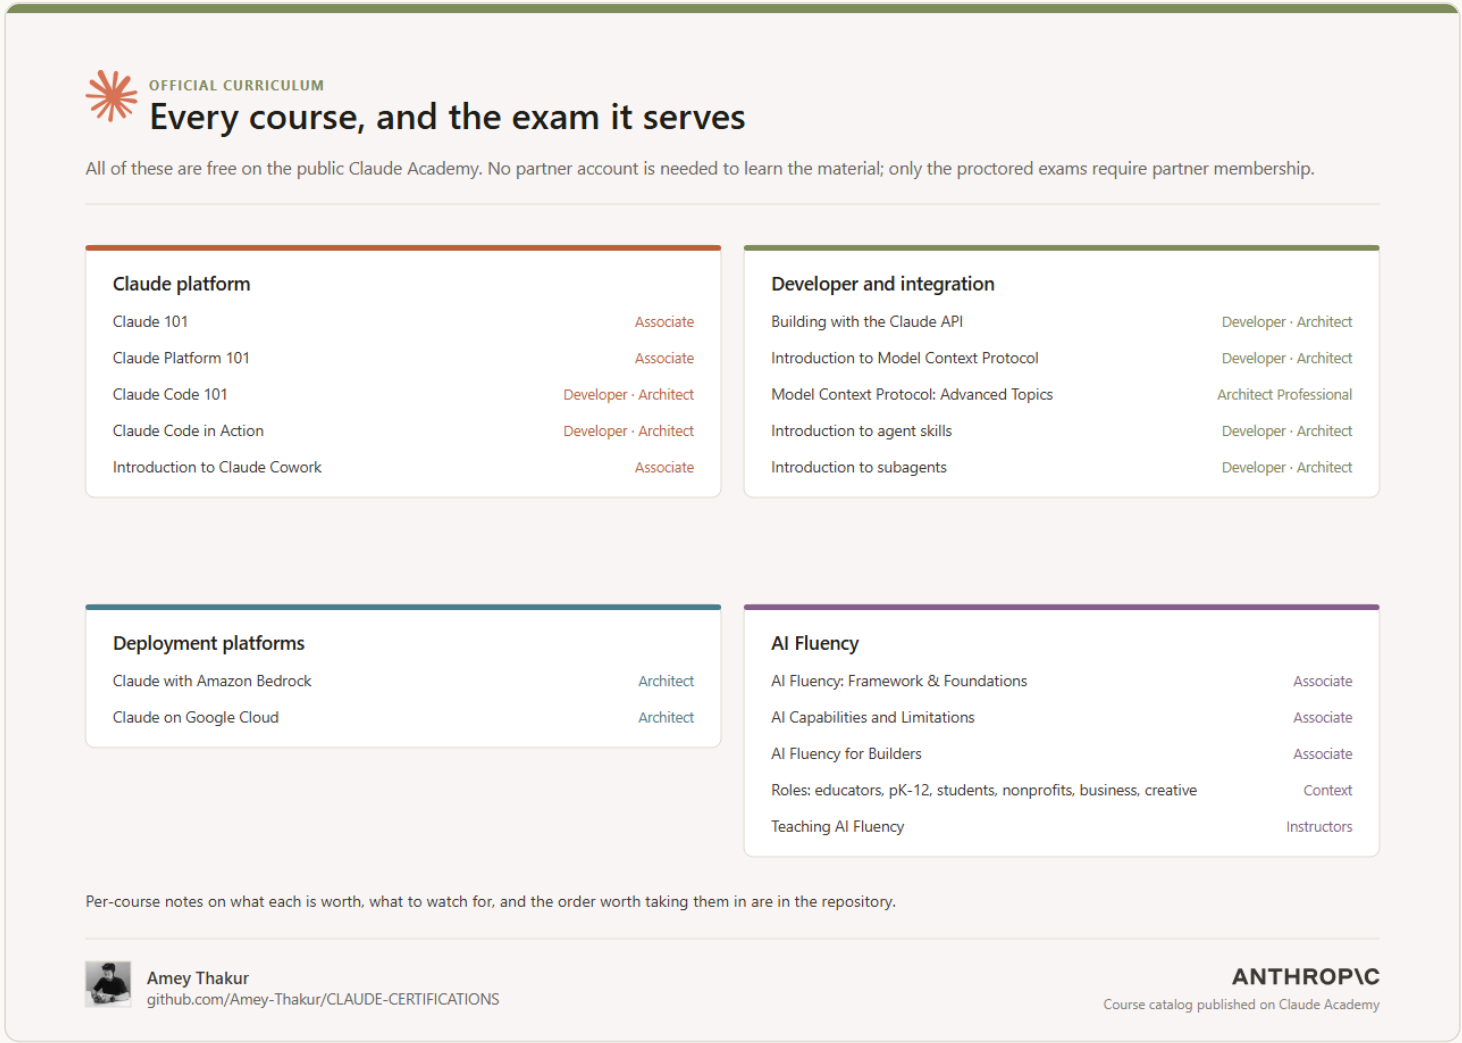

One question, worked through 22

Two prompts worth keeping 23

Preparing 24

The official curriculum

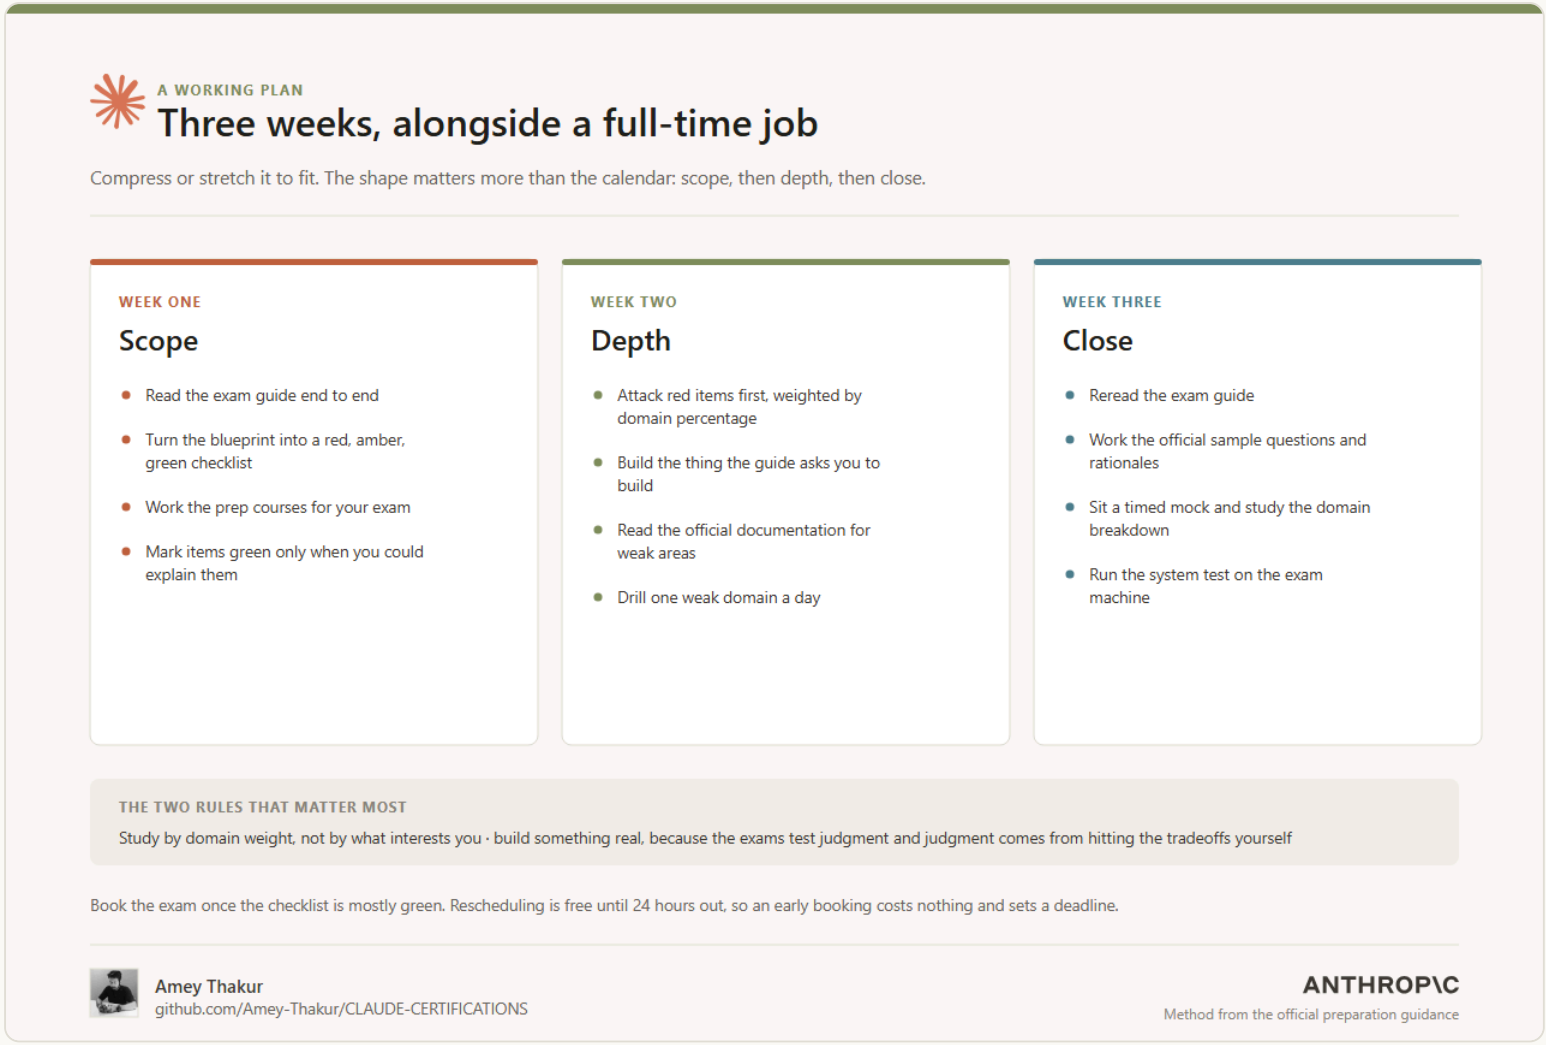

Every Anthropic course, free on the public Academy, and the exam each one serves.

Notes on what each course is worth and the order worth taking them in are at amey-thakur.github.io/CLAUDE-CERTIFICATIONS

A working study plan

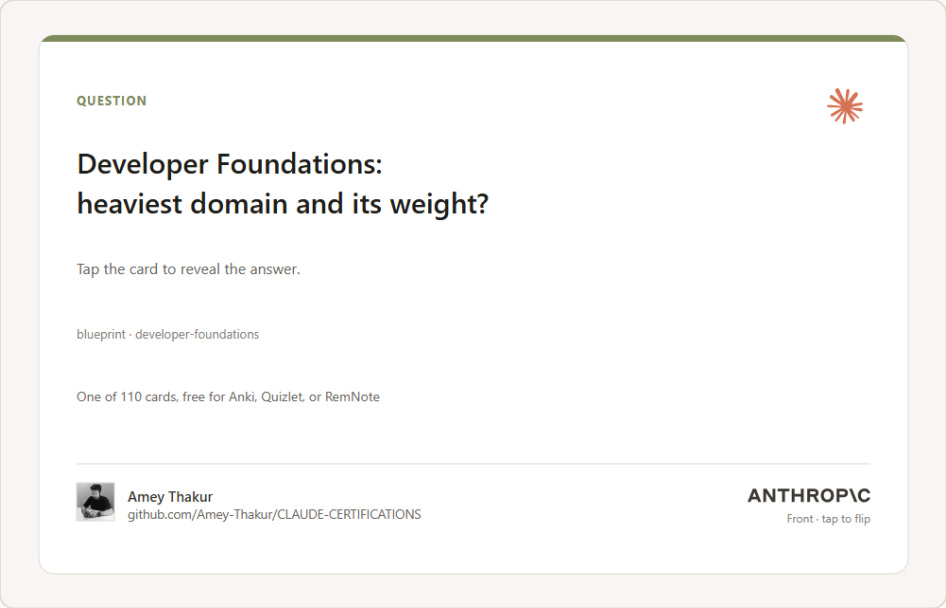

Three weeks alongside a job: scope, then depth, then close.

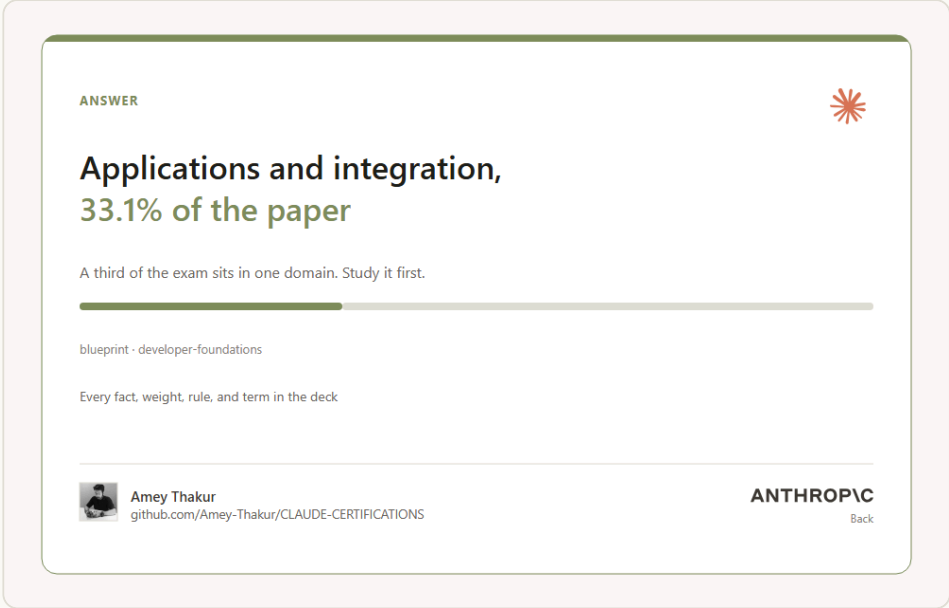

A progress tracker keeps this checklist for you, weighted by exam share, at amey-thakur.github.io/CLAUDE-CERTIFICATIONS

The deck, one card at a time

Every fact, domain weight, rule, and glossary term in this companion is also a flashcard. One hundred and ten of them, generated from the same source as everything you have read, so they cannot drift out of date.

Turn them in the browser, filtered by exam or by topic, at amey-thakur.github.io/CLAUDE-CERTIFICATIONS/guide/flashcards, or download the deck as a single tab-separated file that Anki, Quizlet, and RemNote all import directly. Use it for the facts that have to be automatic on the day: weights, codes, retake windows, and the terms the questions assume you know.

WHAT THE QUESTIONS ACTUALLY LOOK LIKE

One question, worked through

Every practice question in this repository is written the way the real items are: a scenario, one best answer, and three distractors that each fail a stated constraint. This one is from Architect Foundations. Read the scenario, commit to an answer, then read the reasoning.

Agentic architecture. Your support agent resolves most tickets but sometimes loops indefinitely, re-calling `lookup_order` on the same order. What is the correct structural fix?

A. Raise `max_tokens` so the loop has room to finish

B. Remove the `lookup_order` tool

C. Add explicit loop-termination conditions: cap tool iterations, detect repeated identical calls, and route to escalation

D. Lower the temperature

THE ANSWER IS C

Agent loops need engineered termination: an iteration budget, detection of repeated identical calls, and an escalation path for when the agent cannot make progress. The fix is structural, not a setting.

WHY THE OTHERS ARE WRONG

Raising the token budget (A) delays the symptom without bounding the loop. Removing the tool (B) breaks the resolution the agent exists to perform. Lowering the temperature (D) changes how the model words things and does nothing to iteration.

WHAT THE QUESTION IS REALLY TESTING

Not whether you know what an agent is. Whether you reach for a control when you see unbounded autonomy. Every distractor here is something a working engineer might genuinely try first, which is exactly how the real exam builds its options: plausible, and wrong for a reason you can name.

There are 319 more. Three hundred and twenty original questions, eighty per certification, split between topic practice and three timed mock exams each. Every one carries this kind of reasoning, not just a letter.

amey-thakur.github.io/CLAUDE-CERTIFICATIONS

STUDY WITH CLAUDE

Two prompts worth keeping

Claude is the most patient tutor you will get, but only if you ask properly. These two do more than any others. Type them as written, replacing the *coral italics* with your own details.

FIND OUT WHERE YOU ACTUALLY STAND

Run this before you study anything. It produces a ranked list, which beats working through the syllabus in order.

> You are helping me prepare for the *Claude Certified Architect, Foundations* exam. Here is the published blueprint with the weight of each domain: *paste the domain table*.
>
> Ask me one question at a time, twelve in total, spread across the domains in proportion to their weight. Scenario-based, one best answer, four options. Do not tell me the answer until I have committed to one.
>
> After all twelve, give me a score per domain, the two domains where I am weakest in weight order, what specifically I misunderstood rather than which questions I missed, and what to study first.

UNDERSTAND A QUESTION YOU GOT WRONG

The highest-value minute in your preparation. A wrong answer you understand is worth more than ten right ones you guessed.

> I got this practice question wrong. Question: *paste it with all four options*. I chose: *your answer*. The correct answer is: *the correct answer*.
>
> Do not just restate the rationale. Tell me what rule the question is actually testing, why the option I chose is attractive and what constraint it fails, what would have to change in the scenario for my answer to become correct, and two other situations where the same rule decides it.

Seven more, including a study planner, an Architect scenario rehearsal, and one that reads a real score report and tells you the smallest gap to close, are at amey-thakur.github.io/CLAUDE-CERTIFICATIONS/guide/prompts

Preparing

A METHOD THAT WORKS

1. **Read the exam guide twice.** Once before studying, once after. It states plainly that the blueprint is the authoritative scope: anything outside it is not on the exam.
2. **Turn the blueprint into a checklist.** Mark each objective red, amber, or green, and study red first, weighted by the domain percentages rather than by interest.
3. **Build something real.** Every official guide asks for this. The exams test judgment in scenarios, and judgment comes from having hit the tradeoffs yourself.
4. **Use the official sample questions as calibration.** The rationales matter more than the answers: they show what the exam considers wrong, and why.
5. **Book once the checklist is mostly green.** Rescheduling is free until 24 hours out, so an early booking costs nothing and sets a deadline.

PRACTICING WITHOUT BREAKING THE AGREEMENT

Every candidate accepts a non-disclosure agreement covering exam questions, answer options, and scenarios, and it extends explicitly to online forums. Real exam content must never be shared or sought. There is also no official practice exam: the previous platform's was retired in the move to Pearson.

What works instead, and stays clean: generate your own questions from the published blueprint. The repository ships a bank of original questions with a shuffled, timed engine that runs in the browser or a terminal, and a set of Claude Code commands that quiz, drill, and plan against the blueprints.

> **The honest framing.** Practice questions calibrate your knowledge against the blueprint. They are not exam items, and treating any question set as "the real ones" is both a policy violation and a poor strategy, because the item bank is confidential and rotates.

PART 4

Sit it

Booking, proctoring, and the day itself, then what the result means and what happens if it is not the one you wanted.

IN THIS PART

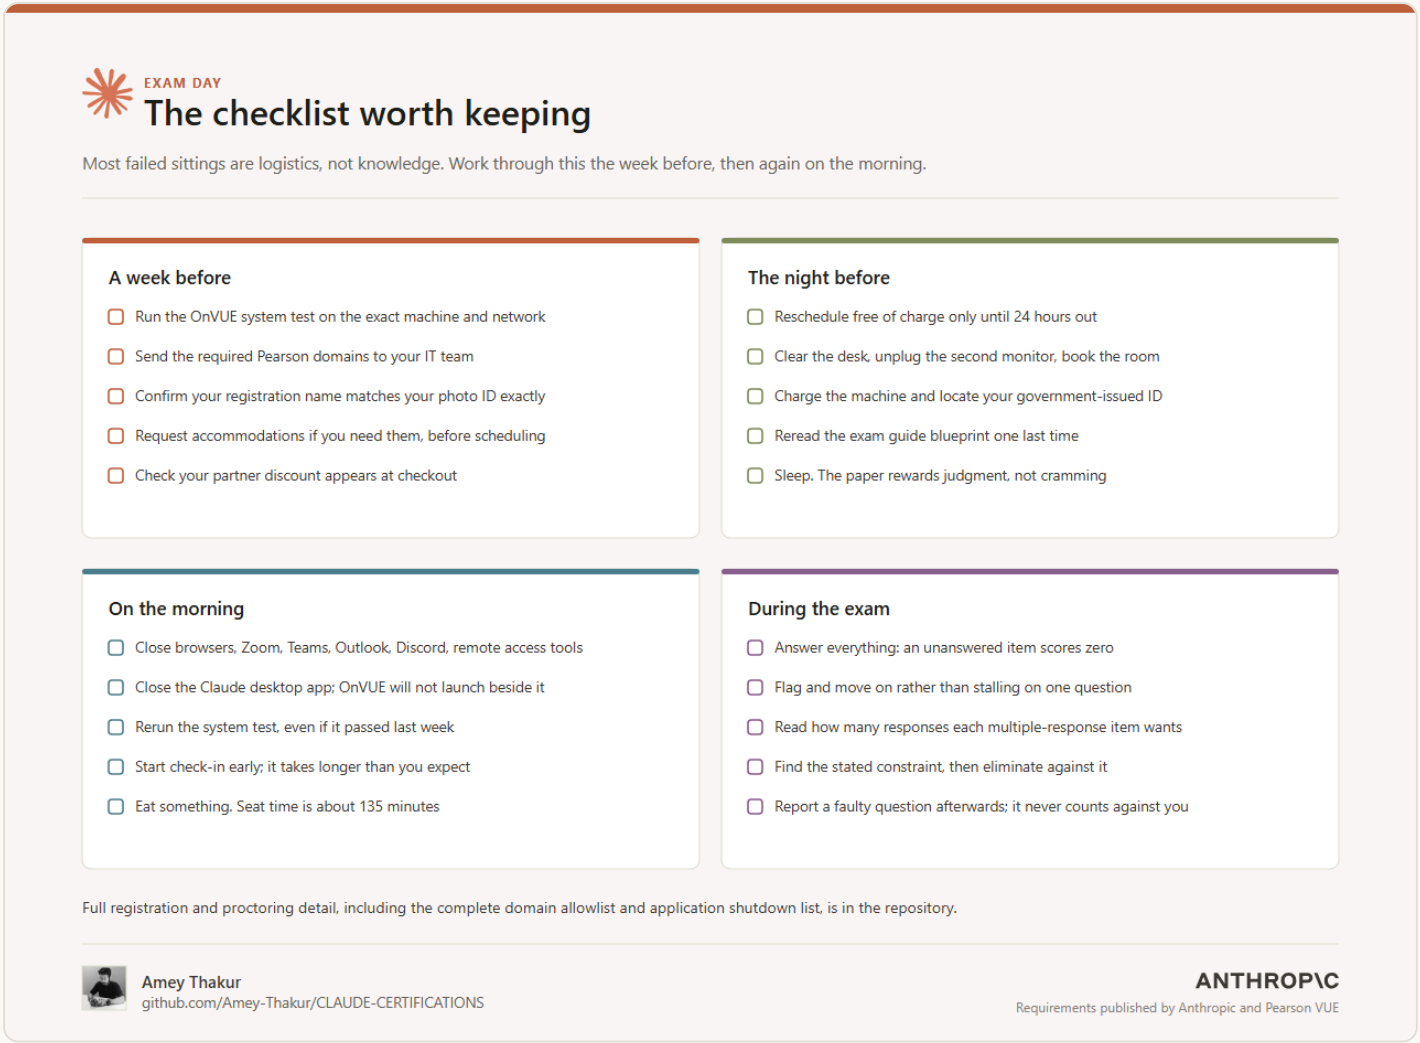

Exam day 26

Scoring and second chances 27

Policies and scoring 28

Exam day

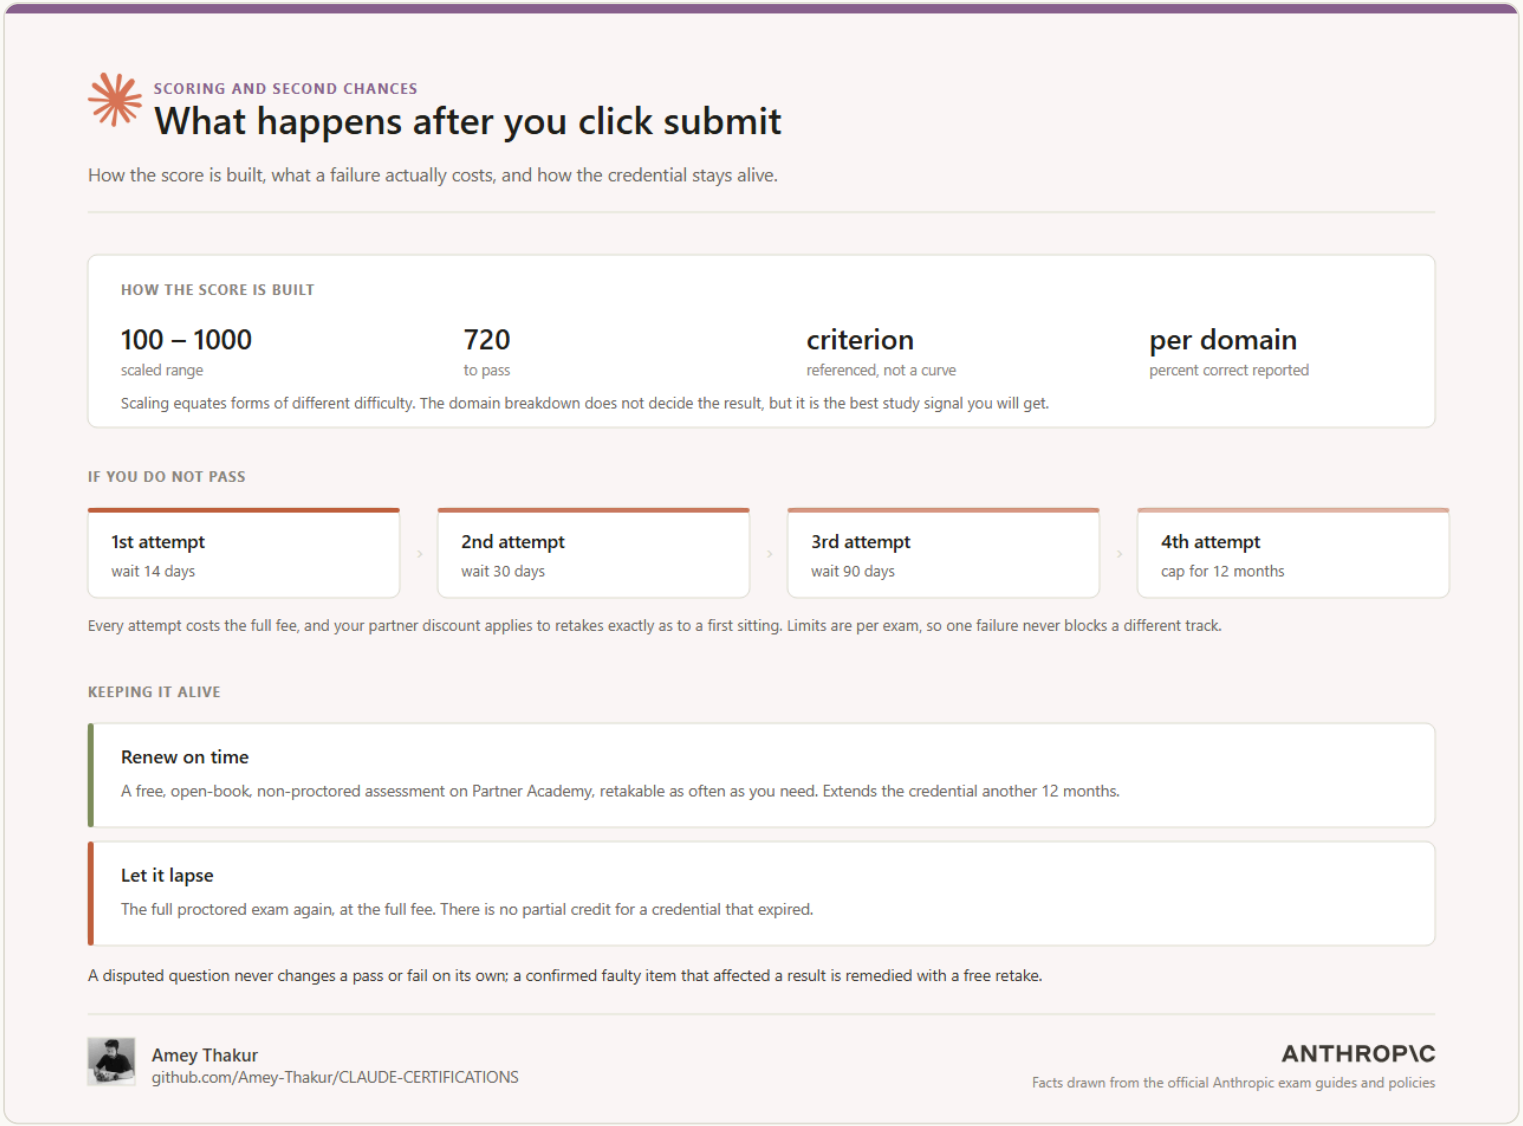

Most failed sittings are logistics, not knowledge.

The complete network allowlist and application shutdown list are at amey-thakur.github.io/CLAUDE-CERTIFICATIONS

Scoring and second chances

How the score is built, what a failed attempt costs, and how the credential stays alive.

Policies and scoring

HOW THE SCORE IS BUILT

Each exam is criterion-referenced: you are measured against a fixed standard set by subject matter experts, not against other candidates. Results are reported on a scaled range of 100 to 1,000, with 720 required to pass, and scaling equates forms of slightly different difficulty.

Your score report also shows percent-correct per domain. Those percentages do not decide the result, but they are the most reliable study signal you will get, and they should drive the next plan.

RETAKES

Waiting periods grow with each failed attempt: 14 days after the first, 30 after the second, 90 after the third, with at most four attempts per exam in a rolling 12 months. Each attempt costs the full fee, and partner discounts apply to retakes as to first sittings.

VALIDITY AND RENEWAL

A credential lasts 12 months from the day it is earned. Renewing before it expires is free: an open-book, non-proctored assessment on Anthropic Partner Academy, retakable as often as needed, extending the credential another 12 months. The credential itself arrives as a digital badge from Credly, by email, shortly after a pass. Let it lapse and the full exam must be passed again at full fee.

APPEALS AND FAULTY QUESTIONS

Decisions can be appealed to Pearson within 14 days. Separately, anyone may report a question that looks wrong, ambiguous, or out of scope; reporting never counts against you, and a confirmed faulty item that affected a result is remedied with a free retake rather than a changed score.

Eligibility. Certification is currently open to people at Claude Partner Network organizations, registering with a recognized company email. Domain record changes take 7 to 10 days, so resolve any email problem well before you plan to sit.

PART 5

Keep going

You now have everything the exam asks of you. What follows is where to find the parts that keep moving.

IN THIS PART

The words the exams assume you know 30

The courses behind this companion 31

The repository behind it 32

Where to go next 33

REFERENCE

The words the exams assume you know

The exam guides use these terms without defining them, and questions are written on the assumption that you read them the way the program does. 24 terms.

Blueprint. The exam content outline in each exam guide: the domains measured, their weights, and the objectives items are written against. The authoritative scope of the exam

Domain weight. The approximate share of scored items drawn from a domain, for example 33.1% for the Developer exam's Applications and integration domain

Task statement. A numbered capability within a domain, used in the Architect Foundations guide, that items are written against

MQC. Minimally qualified candidate: the profile of the weakest examinee who should still pass, which the passing standard is calibrated to

Criterion-referenced. Scored against a fixed standard rather than against other candidates. There is no curve

Scaled score. The reported score on a 100 to 1,000 range, equated so results are comparable across exam forms of slightly different difficulty

Cut score. The passing threshold: 720 scaled, for all four exams

Item. An exam question. Multiple-choice items have one best answer; multiple-response items state how many responses to select

Scenario-based exam. The Architect Foundations format: 4 scenarios drawn from a published bank of 6, each framing a set of items

Exam form. A specific assembled version of an exam; forms vary slightly, which scaled scoring corrects for

NDA. The non-disclosure agreement accepted before the exam starts: exam content may not be shared, reproduced, or discussed, including in study groups and forums

Pearson VUE. The company that delivers the exams, online and at test centers, since June 30, 2026

OnVUE. Pearson's online proctoring application, run on your own computer under remote supervision

Test center. A physical Pearson location with provided equipment, the alternative to online proctoring

Credly. The digital badging platform that issues the shareable credential after a pass

CPN. The Claude Partner Network, whose member organizations are eligible for certification

Partner tier. An organization's CPN level: Registered pays list price; Select, Preferred, and Global Premier receive 50% off exams

Prep path. The curated course sequence on Partner Academy for a specific certification

Exam guide. The official PDF for each certification: blueprint, sample questions, policies, and scoring. The single most important study document

Renewal assessment. The free, open-book, non-proctored assessment on Partner Academy that extends a credential 12 months when passed before expiry

Lapse. Letting a credential expire without renewing; regaining it requires the full exam at full fee

Appeal. A formal challenge to a certification decision or result, filed with Pearson within 14 days

Question report. Flagging a possibly faulty item to Pearson; separate from an appeal and never counted against you

Accommodations. Testing adjustments for documented needs, requested through Pearson and approved before scheduling

RECEIPTS, NOT CLAIMS

The courses behind this companion

Every course and tutorial in the official Claude Academy curriculum, completed before this companion was written. Not all of them issue anything to show: 25 did, 22 of those carry a Skilljar verification record, and 25 carry a Claude Academy badge that verifies on Anthropic's own domain, 26 badges in all because one course issued two.

BEYOND THIS COMPANION

The repository behind it

This companion is a snapshot, printed on a date. The repository is the living version: maintained, link-checked every week, and updated when Anthropic changes the program. These are the things paper cannot do.

PRACTICE, NOT JUST READ

A bank of original practice questions with a shuffled, timed engine that runs in your browser or your terminal. It reorders questions and options on every run, so nothing can be memorized by position, and it scores you per domain the way the real report does. Three timed mock exams per certification, each with questions that appear nowhere else, so a second sitting still measures something.

STUDY THE WAY YOU ALREADY STUDY

A flashcard deck covering every fact, domain weight, rule, and term, in a format Anki, Quizlet, and RemNote all import directly. A progress tracker that weights each domain by its share of the exam, so the number tells you how much of the paper you can actually answer. Anthropic's own videos, including the complete AI Fluency course, arranged by the exam each one serves and playable in the page.

A COACH THAT KNOWS THE BLUEPRINT

Open the repository in Claude Code and six commands are waiting: run a diagnostic to find weak domains, drill one of them, sit a timed mock, build a study plan or a week of sessions, and interpret a real score report into a decision.

THE OFFICIAL DOCUMENTS, KEPT CURRENT

Every official exam guide and policy PDF, mirrored with its source URL and the date it was last checked, so you can verify anything here against the original in one click. A weekly job re-checks every link, and a script re-downloads the documents and reports what changed.

THE PARTS THAT GO STALE FASTEST

Fees, discounts, question counts, and the migration-era rules change. The repository carries dated facts and a maintenance routine designed to catch them. When something here disagrees with the official exam guide, the guide is right, and the repository is where the correction lands first.

OTHER CANDIDATES

A discussion space for preparation questions and exam experiences, under one firm rule: real exam content is never posted. If this companion helped, the most useful thing you can do is answer someone else's question there.

Everything is free and open source. No account, no paywall, no email capture. Take it, use it, fork it, and send it to whoever is studying next.

github.com/Amey-Thakur/CLAUDE-CERTIFICATIONS

Where to go next

FOUR PLACES TO GO

github.com/Amey-Thakur/CLAUDE-CERTIFICATIONS

The repository: practice engine, flashcards, progress tracker, and the mirrored official documents.

amey-thakur.github.io/CLAUDE-CERTIFICATIONS

The same material as a searchable website, with the practice engine in the browser.

academy.claude.com

The official courses, free, without a partner account. Registration and the exams run through Anthropic Partner Academy and Pearson VUE.

github.com/Amey-Thakur/CLAUDE-CERTIFICATIONS/discussions

Questions about preparing, answered in the open, so the next candidate finds the answer instead of asking again.

IF THIS HELPED

Share it with whoever is studying next. Corrections are welcome as issues, and questions about preparation belong in the repository's discussions.

If it saved you time, starring the repository is the whole marketing budget: it is how the next candidate searching for this finds it instead of a braindump site.

> Whatever you are preparing for, the path is the same: read the blueprint, close the gaps honestly, build something real, and book the date. You do not need permission or a better moment.
>
> **– Amey Thakur**
